TECHNICAL SKILLS

Languages: Python, SQL, Java

Python Packages: Hugging Face Transformers, LangChain, LangGraph, OpenAI API, vLLM, Accelerate, Whisper, PyTorch, TensorFlow, Scikit-learn, PySpark, Pandas, NumPy, Matplotlib

Concepts: RAG, Embeddings, Vector Search, Prompt Engineering, Instruction Tuning, Fine-Tuning (LoRA), Experiment Tracking, Model Evaluation, Distributed Training, Quantization, Model Compression, Self-Supervised Learning

Tools: Git, Singularity, Docker, Linux

EDUCATION

Master of Science - Computer Science

Toronto, Canada

York University

3.96/4.0 GPA.

PROFESSIONAL EXPERIENCE

Associate Applied Machine Learning Specialist

09/2025 – Present

Vector Institute

Toronto, Canada

- **Accelerated deployment workflows by 95%** by engineering a Python-driven automation pipeline, delivering a reusable framework adopted by industry teams to scale operations.
- **Operationalized AI transparency and governance standards** by architecting a production-ready telemetry toolkit (GitHub) with FastAPI to track GPU utilization, model lineage, and environmental impact.
- Pioneered **SONIC-O1** , the **first omnimodal benchmark** for audio-video MLLMs (231 videos, 5k human-verified QAs); identified a 22.9% temporal grounding gap in Gemini 3.0 Pro vs. open-source models.
- Architected **SONIC-O1-Agent** , a multi-agent framework for evidence-based video understanding; utilized cross-modal grounding and tool-orchestration to deliver interpretable reasoning for complex long-context multimodal tasks.
- Developed and shipped **UnBias+** , a Python package for bias detection using instruction-tuned Qwen-3 models with character-level offset prediction and a FastAPI serving layer.
- Optimized large-scale inference by **cutting GPU costs 50% using tensor-parallel sharding** (vLLM + Accelerate) on A40 clusters; authored industry-standard fairness guidance aligned with EU AI Act and NIST RMF.

Research Assistant

08/2024 – 04/2026

York University

Toronto, Canada

- Achieved **92% SOTA accuracy** for Wi-Fi activity recognition via self-supervised contrastive learning, successfully eliminating the need for labeled data across multi-domain benchmark scenarios.
- Improved **inference 17x with 20% smaller models** by compressing time-series representations, maintaining 90%+ fidelity for edge deployment.
- **Reduced 90% of labeled data needs** via few-shot meta-learning, adapting during deployment with fewer than 100 examples.
- **Developed MU-SHOT-Fi**, boosting multi-user Wi-Fi activity recognition by 22% under domain shifts without labeled source data.

Research Engineer

09/2023 – 06/2025

Asas.Ai

- Developed a Context-Aware Story generation framework using Large Language Models (LLMs), integrating multimodal input via the GPT-4 Vision API.
- Enhanced language understanding and task-specific performance through instruction-tuning on Arabic datasets for various creative writing tasks.

Research Engineer

02/2024 – 10/2024

King Abdullah University of Science and Technology (KAUST)

- **Reduced memory by 75%** while maintaining 90%+ accuracy using TinyML NLP quantization + compression for edge devices.
- Achieved **30% efficiency gain over federated learning** by implementing Split Learning for privacy-preserving NLP; measured efficiency and CO2-aware tradeoffs.

PROJECTS

Multi-agent Framework for Finding Audio-Visual Needles by Reasoning over Multi-Video Haystacks

- Implemented the MAGNET framework to enhance Audio-Visual understanding and recommendation systems.
- Utilized transformers and open-source models implementations and documenting use cases.

Context-Aware Recommender for Fairness Requirements Engineering

- Implemented the ReFAIR framework for fairness-aware requirements engineering.
- Validated reproducibility and documented findings to support fairness research.

Fairness-Aware Medical Imaging

- Implemented adversarial and balanced fine-tuning methods to mitigate demographic bias in chest X-ray classification.
- Achieved improved fairness across race, gender, and insurance subgroups without sacrificing clinical performance.

PerfectPrayer

- Developed a real-time prayer motion tracking system using smartphone IMU sensors, deployed on Android devices.
- Applied time-series data preprocessing and motion recognition algorithms to for real-time accuracy during activities.
